PROFESSIONAL SUMMARY

Results-oriented aspiring AI Engineer with strong foundations in Python, Machine Learning, Deep Learning, Computer Vision and Generative AI. Experienced in developing machine learning models, performing feature engineering, hyperparameter tuning and model evaluation using Scikit-Learn and TensorFlow. Professional experience supporting US healthcare, insurance and financial operations through data validation, reporting, dashboard preparation, client communication and Excel-based process improvements. Hands-on exposure to Flask, Django, Streamlit, Docker, LangChain, OpenAI, Hugging Face, Azure and AWS. Passionate about building production-ready AI applications while continuously learning modern AI technologies.

CORE COMPETENCIES

- Programming: Python, SQL, Flask, Django, Java, JavaScript
- Machine Learning: Scikit-Learn, Random Forest, XGBoost, SVM, KNN, Decision Trees, Logistic Regression, Feature Engineering, Cross Validation, Hyperparameter Tuning
- Deep Learning: TensorFlow, CNN, RNN, LSTM, OpenCV, YOLO
- Generative AI: LangChain, OpenAI API, Hugging Face, Ollama, Prompt Engineering
- Analytics: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Excel, ETL
- Deployment: Streamlit, Docker, Git, GitHub | Cloud: Azure, AWS

PROFESSIONAL EXPERIENCE

Process Associate | Stratsol Software Systems (Client: Capgemini)

July 2024 - January 2025

- Managed US healthcare, insurance and financial datasets while maintaining approximately 95% processing accuracy.
- Validated around 500 business records daily across multiple client accounts and supported insurance claim workflows.
- Designed Excel-based reporting templates that reduced manual reporting effort by approximately 40%.
- Prepared daily reports, dashboards and operational documentation for business stakeholders.
- Worked directly with US clients to resolve claim-related queries and ensure SLA compliance.
- Collaborated with a 60-member cross-functional team supporting clients across three countries.
- Mentored three junior associates and created onboarding documentation.

Machine Learning Engineer Intern | Pantach Software Solutions

2023 - 2024

- Built end-to-end ML solutions using Python, Pandas, Scikit-Learn and TensorFlow.
- Developed classification and regression models for Telecom Churn, House Price Prediction, Titanic Survival and Iris datasets.
- Performed preprocessing, feature engineering, feature selection, cross-validation and hyperparameter tuning.
- Evaluated models using Accuracy, Precision, Recall, F1-Score, RMSE, MAE, R^2 and Confusion Matrix.
- Published projects on GitHub and deployed selected applications using Streamlit.

SELECTED PROJECTS

Intelligent Network Path Prediction using RBF Neural Network — Developed a deep learning model on a 30K-record dataset to optimize network path prediction. Improved performance through feature engineering, Gaussian activation functions and hyperparameter tuning.

Real-Time Object Detection using YOLOv4 & OpenCV — Built a real-time object detection application using OpenCV and YOLOv4 achieving approximately 92% detection accuracy with Non-Maximum Suppression and confidence thresholding.

Python Tic-Tac-Toe Game — Designed and implemented an object-oriented Python game demonstrating modular programming, reusable code and AI-driven gameplay logic.

EDUCATION

Master of Computer Applications (MCA) | Bharathidasan University | 2022 | CGPA: 8.2

Bachelor of Computer Applications (BCA) | Bharathidasan University | 2020 | CGPA: 6.8

CERTIFICATIONS

IBM – Machine Learning with Python | Kaggle – Intermediate Machine Learning | Kaggle – Advanced Machine Learning | Simplilearn – Data Analysis & Power BI | Udemy – Machine Learning & AI with Hands-on Projects
